Release 3.6.0.4 for EAGLE 5 and 6
January 26, 2013 06:20PM
Fixed a "spaces in the path" bug that affected Windows users.
Join the Yahoo! group.
Happy Milling!
Regards,
JJ

Feel free to submit your completed, well documented project info if you want to show it off here.. Note that most of the unmilled board is conveniently used for ground plane (that's why there are some drilled holes not using pads).. Typically you output 4 files: top, bottom, drill, and milling (milling layer is the optional board cutout) These files are standard Gcode text files specifying CNC X,Y, and Z moves.

Welcome to PCBGCODE Welcome to PCBGCODE COM Home of PCB-Gcode-Wizard This website is dedicated to the community of users who want to make Printed Circuit Boards (PCBs) CHEAPLY and without chemicals.. Trying to get away from chemical etching I just downloaded PCB-Gcode 3 3 2 zip from the Eagle site and loaded it into my ULP folder but what.. But, you can prototype a lot of stuff just using two sided PCBs The process is generally this: 1) Enter the electrical schematic in EAGLE.. 4) Use a Gcode editor/plotter/viewer to verify and optimize the Gcode files A good one for this is the PCB-GCODE-WIZARD program available at this website for only \$18.. And, since vias are generally installed with soldered wires, you can't easily do multilayer boards.

No other software is really available at reasonable cost to do that In addition, it allows users to write User Language Programs (ULPs) to do just about anything with EAGLE.. Our email address is: [CLICK HERE --> CLICK HERE -->](#) Specifically we choose to do the schematic and layout design in Cadsoft's EAGLE software (www.. To accomplish this a CNC milling 'isolation' operation is performed using very small tools at high RPM.. What is PCB-GCODE ULP? It is a fantastic utility that allows you to specify the CNC settings for isolation and which layers you want to export.. Download free version of EAGLE PCB design software intended for hobbyists and makers.. cadsoftusa com) Because it has one really great feature, which is that it will compute the ISOLATION OUTLINES needed to cut around the copper traces.. However, note that the Gcode we are dealing with for PCBs is not like 3D CAD modeling, rather we only need to view it in the XY plane.. The only drawback is that the

milling process is limited to lines/spacing down to around 8 or 10 mils (depending on how much you want to spend on cutters).
